

- **Window low-profile**
provides larger glazing allowing more light to enter the room from the outside, and to obtain a broader, more attractive perspective.
- **Triple glazing unit**
provides higher window parameters related to thermal insulation, safety, soundproofing, and facilitates light penetration into the room.
- **Nano Glue technology**
Nano Glue increases the structure stability and stiffness, and enhances the window resistance to pane cracking during transport, installation and subsequent operations.
- **Minimalistic design**
fits both modern and classic interiors.
- **Exclusive reinforcement system**
Guarantees the stiffness and strength of the window joinery, and high overload resistance.
- **Hidden hinges**
All hinges are invisible to the eye and do not deform the seals, thus maintaining high window tightness.
- **Invisible and aesthetic welding**
V-Perfect technology provides high aesthetics thanks to its invisible welding.

LUM'UP can provide even up to **27%** more light than a standard window.

- Energy efficiency**
- › $U_w = 0,8 \text{ W}/(\text{m}^2\cdot\text{K})$
- Light**
- › Frame with sash assembly 106 mm
 - › Floating mullion assembly 108 mm
 - › $L_t = 82\%$ or $74\text{--}75\%$ for 2-chamber unit

- Durability**
- › Nano Glue technology
 - › Exclusive reinforcement system with thickness up to 3 mm

LUM'UP combines functionality with modern design.

And it's pleasing to the eye

Straight sash line and customization capability of many window elements enable interior personalization.

The full range of over 60 colors is available at www.vetrex.eu

We guarantee that our windows will remain durable for many years by respecting four complementary principles for professional window joinery.

Why us?

home full of light

Window

LUM'UP

Lightens up the interior

Bedroom is a place where you can regenerate and energize.

A sunlit room guarantees a bright mind, as natural light has a positive impact on human body. It is stimulating, comforting and health boosting.

Did you know that...?

- ▶ Appropriate sun exposure regulates the level of stress hormone and melatonin responsible for healthy sleep. It also normalizes blood pressure and metabolism.
- ▶ Sun is one of the main factors contributing to interior microclimate; it influences the room air temperature, and has an antibacterial effect.
- ▶ Natural light promotes well-being, has a stimulating effect and improves concentration. In well-lit rooms, it is easier to focus on study or work.

Thanks to LUM'UP your home will always be full of light. This low profile window has a larger glazing, thus allowing more natural light to enter the room.
